

Deepak Dubey

Software Developer

Phone: 8657671335 | **Email:** dubeydeepakkumar8657@gmail.com | **Location:** Mumbai, Maharashtra
LinkedIn: linkedin.com/in/deepak-dubey-07121b260/

SUMMARY

Software Developer with 2.3 years of experience in Full Stack Development using Angular, Node.js, Express.js, MongoDB, and SQL. Experienced in developing enterprise-grade industrial applications, Human Machine Interface (HMI) systems, real-time monitoring platforms, and inventory management solutions.

Strong expertise in Angular application development, REST API integration, Socket.IO-based real-time communication, debugging production issues, performance optimization, and end-to-end software delivery. Proven ability to collaborate with cross-functional teams and contribute across the complete software development lifecycle.

SKILLS

- **Frontend:** Angular, TypeScript, JavaScript (ES6+), RxJS, HTML5, CSS3
- **Backend:** Node.js, Express.js, REST APIs, Socket.IO
- **Database:** MongoDB, SQL
- **Tools & Platforms:** Git, CI/CD, Postman, Linux
- **Concepts:** Full Stack Development, Real-Time Communication, API Integration, Debugging, Performance Optimization, Object-Oriented Programming (OOP)

EDUCATION

Bachelor of Science in Information Technology (B.Sc. IT), CGPA: 9
KES Shroff College, Mumbai University

Jun 2023
Mumbai, Maharashtra

EXPERIENCE

Software Developer
Acevin Solutions

Jun 2023 - Present
Mumbai, Maharashtra

- Developed and maintained enterprise-grade industrial software applications using Angular, Node.js, Express.js, MongoDB, and SQL.
- Built real-time dashboards for monitoring machine health, welding operations, production metrics, and sensor data visualization.
- Designed and developed Human Machine Interface (HMI) modules for recipe management, welding process monitoring, configuration management, and software package deployment.
- Implemented Socket.IO-based real-time communication between frontend applications, backend services, databases, and machine controllers.
- Developed administration modules for user management, site management, system configuration, and operational monitoring.

- Collaborated with daemon-based services and firmware components to ensure seamless communication across distributed system architecture.
- Investigated and resolved production issues, improving application reliability and user experience.
- Participated in requirement analysis, feature implementation, testing, deployment, and ongoing product enhancements.

PROJECTS

Optical Gas Imaging (OGI) Camera Platform

Role: Full Stack Developer

Technology Stack: Angular, Node.js, Express.js, Socket.IO, SQL

- Contributed to the development and maintenance of an industrial Optical Gas Imaging camera platform consisting of multiple daemon-based services.
- Owned development and maintenance of the Web Server application used for camera configuration, user management, site administration, and operational control.
- Developed features for real-time sensor monitoring, camera settings management, image management, and recorded data storage.
- Implemented file management and explorer functionalities for viewing and organizing captured images and recorded files.
- Integrated Socket.IO-based communication between frontend applications and backend services for real-time updates.

Human Machine Interface (HMI) – Dual Torch Welding System

Role: Full Stack Developer

Technology Stack: Angular, Node.js, Express.js, Socket.IO, MongoDB

- Developed and maintained HMI applications for industrial welding machine systems.
- Designed welding operation screens supporting weld count management, live welding visualization, process monitoring, and spot-check validation.
- Built recipe management modules enabling users to create, update, save, and synchronize welding parameters.
- Developed process monitoring dashboards and analytics screens for operational insights.
- Created daemon health monitoring interfaces displaying connectivity and service status information.
- Implemented software package management modules supporting deployment and maintenance of machine software components.

Enterprise Component & Asset Management System

Role: Full Stack Developer

GitHub: github.com/Dee-Dubey/ECMS

Technology Stack: Angular, Node.js, Express.js, Socket.IO, MongoDB

- Developed a centralized inventory and asset management platform for tracking hardware components and IT assets.
- Implemented inventory allocation, stock management, issue-return workflows, and location tracking functionality.
- Designed and developed Bill of Materials (BOM) functionality for component aggregation and automated cost calculations.
- Built low-stock monitoring mechanisms improving inventory visibility and procurement planning.
- Developed REST APIs and integrated Angular frontend with Node.js backend services
